Leaders in Artificial Turf Cleaning and Maintenance

The North West's leading synthetic turf maintenance company. Our services range from full refurbishment to weekly cleaning on a full contract to a one-off basis. Within our portfolio we maintain schools, colleges, private and professional sports clubs. Our wide range of equipment includes the HOERGER SKU 1500, the latest development in routine synthetic turf maintenance.

Our Services Include

- Regular Contract Maintenance
- Deep Cleaning
- De-Compaction
- Granular Re-distribution
- Refurbishment/Full Wet Deep Clean
- Power Brushing
- Sand/Rubber Infill Top Up
- Seam Repairs
- Line Marking
- Litter Collection
- Moss/Weed Treatments
- Infill Testing

Regular routine maintenance of your synthetic turf achieves benefits for both the pitch owners and its users. The economic argument between the value of spending money on maintenance has been proven. Regular maintenance dramatically increased the life span and playing quality of synthetic pitches.

Maintain Your Artificial Services

Deep Clean/Granular Distribution

This process can be carried out monthly if required, on heavily used areas, but as a minimum should be carried out twice per year. The surface is brushed, lifting out the top layer of sand/rubber and sieving it, vacuuming the debris, carpet fibres etc as well as removing other user waste deposited on the carpet. Clean infill processed by the machine is then deposited back onto the playing surface to await working back into the carpet.

Refurbishment

At certain times artificial turf becomes so contaminated that surface drainage through the carpet fails resulting in organic matter floating to the surface, appearing as a black sludge. This situation makes play impossible as the surface becomes slippery, at this point a refurbishment of the carpet should be considered.

Once the cleaning process has been completed and contaminated infill removed, the surface can be re-dressed with a new sand infill.

After successful completion surface drainage and grip will be restored, providing a surface that will last for several more years if correct maintenance procedures are followed.
